Dear Mr Donovan

In matters of security, it is sensible neither to confirm nor deny material of this sort, as you well know. The decision as to whether to publish, and what comment you make on it, is, as ever, yours. But neither you nor your readers should draw conclusions one way or the other from our not commenting.

Regards

Richard Wiseman

Dear Mr Wiseman

If someone was trying to perpetrate a hoax, I feel confident that you would have said so, as it would not entail revealing anything which would compromise your Business Continuity Plans, which of course every major oil company has, bearing in mind that oil company HQ offices qualify as strategic targets.

It would be possible to discuss the impact on Shell employees and their families as raised in the insider email without revealing any details whatsoever of your plans. Shell has chosen not to do so.

We will leave it to our readers to draw their own conclusions.

Yours sincerely  
John

Dear Mr Wiseman

I am sorry to be a nuisance by contacting you when this matter does not fall within your area of responsibility, but I do not know who is the appropriate person at Shell to deal with this matter.

The following are extracts from an email received today from a Shell insider. It seems proper under the circumstances to give Shell the opportunity to confirm or deny any of the information/allegations stated below. I would therefore be grateful if you would kindly pass the information to the appropriate person at Shell.

If you supply us with a contact for use in future correspondence, then we will not contact you again. I am sure the thought of no more correspondence from the Donovan's will be pleasing.

Kind regards  
John

#### Shell's disregard for personal safety

Shell's management is following a flawed plan and disregarding its own safety policies. They have abused the trust given to them by their employees. Specifically, some of Shell's divisions have created a "business continuity management" office which purports to ensure the continuation of Shell's business.

While obviously important, Shell believes it can only achieve this goal by placing its employees and families in danger. Shell has established "emergency office locations" at remote regions (one at 1313 Research Parkway, Number 200, College Station, Texas 77845) and at a suburb of London (Walton-on-the-Thames); both of these locations are considered far away from Shell's downtown headquarters.

During a stated emergency, employees are required to abandon their families and place themselves at risk by a forced attendance to these remote offices. The offices cost hundreds of thousands of dollars to maintain and have been proven as a failure during several real crisis. Yet Shell's management refuses to change plans.

Some of us have tried to protest these policies but have also watched as dissenters have been dealt with sternly. We cannot stand idly by while our safety is so carelessly disregarded.
